

How to Watch Stock Cycles (F&O Cycle Radar)

A practical, step-by-step master guide on understanding Gann Harmonic Angles (90°, 180°, 270°, 360°, 720°) to identify high-probability breakout corridors and exhaustion reversal walls.

1. The Core Idea: Markets Move in Circles (Octaves)

Just like a clock face has **360 degrees in one complete rotation**, stock price movements expand and contract in mathematical harmonic angles discovered by legendary trader W.D. Gann.

When a stock starts a swing from any major pivot (Anchor High or Anchor Low), it does not move randomly. It rotates through **exact geometric checkpoints**:

- **90° (Quarter Cycle)**: First pause / Scalp profit target.
- **180° (Half Cycle / The Trampoline)**: The most critical balance line. If breached, **91.1% historical probability** of racing to 360°!
- **270° (Three-Quarter Extension)**: High-speed continuation runway.
- **360° (Full Octave Wall)**: Complete 1-cycle rotation. Major institutional profit booking.
- **720° (Double Octave Ceiling)**: Extreme exhaustion. **81.8% of big rallies stop here**, with a ~40% sharp reversal risk.

2. Visual Gann Cycle Clock & Harmonic Roadmap

3. What the Radar Filter Buttons Mean (On Your Screen)

Dashboard Button	Gann Angle Zone	Exact Actionable Trading Rule
● 720° WALLS	Double Octave Ceiling (Exhaustion)	DO NOT BUY LONG HERE. The move is 2 complete rotations old. 81.8% of swings exhaust at 720°. Prepare for a sharp reversal fade (Buy PE / Sell CE).
▲ 360° OCTAVES	Full Cycle Rotation Target	Major Institutional Target. When a stock hits 360°, book the bulk of swing profits (70-80%). Expect tight consolidation or a pullback before any new drive.
🔥 270° CORRIDORS	Three-Quarter Extension Runway	High-Speed Express Highway. Once 180° is cleared, price accelerates through 270° towards 360°. Trail Stop Loss to 180° and let the trade run.
🎯 180° HARMONICS	Half Octave Balance Point	THE GOLDEN PIVOT. Whichever side breaks 180° triggers a 91.1% historical probability of reaching 360°! Best risk-reward entry zone.
🛡️ 90° QUADRANTS	Quarter Cycle (First Wall)	Scalp Target 1. The first resistance/support obstacle. Book 50% profits here and move Stop Loss to Cost immediately.
⚡ AT ZERO LINE (≤0.35%)	Immediate Reaction Watchlist	Sniper Filter! Shows only stocks that are sitting <i>right now</i> within 0.35% of a key Gann harmonic line. These are ready to trigger immediately.

4. Real Live Trade Examples (From Dashboard Screenshot)

Here is how you read the 4 actual stock cards shown on your dashboard:

5. The Gann Mathematical Formula Behind the Radar

You can calculate these exact levels by hand or in Excel using Gann's Square of 9 formula:

UPSIDE TARGETS (From Swing Low):

$$\text{Target Level} = (\sqrt{\text{Low}} + \theta / 180)^2$$

DOWNSIDE SUPPORTS (From Swing High):

$$\text{Support Level} = (\sqrt{\text{High}} - \theta / 180)^2$$

Where θ (Theta) is the harmonic angle in degrees:

$$\begin{aligned} &\bullet 90^\circ \rightarrow \Delta = 90 / 180 = 0.500 \quad \bullet 180^\circ \rightarrow \Delta = 180 / 180 = 1.000 \quad \bullet 270^\circ \rightarrow \Delta = 270 / 180 = 1.500 \quad \bullet 360^\circ \rightarrow \Delta = 360 / 180 \\ &= 2.000 \quad \bullet 720^\circ \rightarrow \Delta = 720 / 180 = 4.000 \end{aligned}$$

Example: If NIFTY makes a low at 23,000:

- $\sqrt{23000} = 151.6575$
- $180^\circ \text{ Target} = (151.6575 + 1.0)^2 = (152.6575)^2 = 23,304.3$
- $360^\circ \text{ Target} = (151.6575 + 2.0)^2 = (153.6575)^2 = 23,610.6$

6. The 3-Step Execution Checklist for Traders

Step 1: Open the Radar & Click " ⚡ AT ZERO LINE"

This immediately filters out all the noise and shows only the stocks that are touching or within 0.35% of a mathematical Gann level right now.

Step 2: Prioritize 180° Harmonics & 720° Walls

- If a stock is at 180°: Watch for a breakout candle. If it breaks, enter long/short targeting the full 360° move.

- If a stock is at **720°**: Look for rejection patterns to enter counter-trend reversal trades.

Step 3: Click the Stock Card to see the Ladder

Clicking any card automatically populates the red and green degree ladders on top so you know your exact stop loss and next 3 profit targets.
