

Trading Dashboard: The Complete All-Tabs Guide

A comprehensive, friendly breakdown of every single tab on the platform. Designed so anyone—from a beginner friend to an experienced trader—can navigate the dashboard, spot 100% statistical setups, and trade with institutional discipline.

MODULE 1: EXECUTIVE AI BRAIN & MACHINE LEARNING TABS

Regimes, Trap Avoidance & 100% Setups

Dada Thoughts

DAILY EXECUTIVE MASTER THESIS

What it is: The high-level institutional market overview. It categorizes the day into one of the core market regimes (e.g. *State 1: Low-Vol Grind*, *State 2: Equilibrium*, *State 3: Volatile Expansion*) and lists active "Canary Alerts" (VIX, overnight moves, European open warnings).

👉 **How your friend should use it:** Read this **first thing at 9:10 AM** before taking any trade. If Dada Thoughts says "*Dead Zone / Lunchtime Theta Decay*", avoid buying naked Call/Put options. If it alerts "*Expansion Mode*", prepare for large trending breakouts.

Auto-Learner & Mistake Miner

SELF-IMPROVING POST-MORTEM

What it is: The platform's automated machine-learning post-mortem system. It continuously audits past stop-loss (SL) hits to discover *why* trades failed (e.g., failed stock breakouts due to overall index drag, fake breakdowns on low-volume neutral days).

👉 **How your friend should use it:** Check the "**Auto-Learned Daily Constraints**". Example Rule: "*Never buy Call options on stock breakouts if Nifty is trading below its open or printing negative PCR drift.*" This tab keeps you from repeating costly mistakes!

Data Learning (Live 100% Signal Scanner)

🔥 100% REAL-TIME SIGNALS

What it is: A real-time condition scanner programmed with the **24 perfect 100% win-rate setups** discovered across 2,816 historical sessions (2015–2026). It does not clutter the screen with historical noise—it **only fires when a setup is active right this second!**

👉 **How your friend should use it:** Keep this tab open during market hours. If it shows an alert with **CRITICAL 100%**, it means the current market condition has had **zero failures in 11 years** of history. Follow the suggested strike and action immediately.

💡 **Pro Tip:** Use the "*Manual Mode*" button to test hypothetical scenarios or practice non-market hour setups.

Deep Learnings

11-YEAR DATA MINING VAULT

What it is: The statistical encyclopedia of the Indian stock market. Contains backtested statistics on VIX 1-point bands, Day-of-the-Week breakout tendencies, Initial Balance (IB) expansion rates, and session extreme time windows.

👉 **Key Stat to Remember:** Over **50% of all sessions** establish their absolute high or low of the day during the final 45 minutes of trading (Period L: 2:45–3:15 PM and Period M: 3:15–3:30 PM). Never exit second-half trend trades prematurely!

🌀 Cycle (Sq of 9 & Gann Harmonic Radar)

LIVE F&O RADAR (212 STOCKS)

What it is: Scans all 212 F&O stocks every second and identifies which stocks are touching mathematical Gann degree angles (90°, 180°, 270°, 360°, 720°) measured from major swing anchors.

- 👉 **How to use:** 1. Click "⚡ **AT ZERO LINE (≤0.35%)**" to see stocks touching a level *right now*.
 2. If a stock is at **180°** (like MCX at ₹3,334.8), buy the breakout for a high-probability run to 360°.
 3. If a stock is at **720°**, never chase longs; look for exhaustion candles to fade.

🏠 Historical (Matching Cases)

HISTORICAL TWIN FORECASTER

What it is: Scans through 11 years of past market sessions to find historical days that had the **exact same opening characteristics** (identical gap %, same VIX level, same day-of-week, same prev-day trend).

- 👉 **How your friend should use it:** See what the top 5 historical twin days did. If 5 out of 5 historical twin days opened flat, drifted down to test the morning low, and closed at the low of the day, you know exactly what institutional behavior to expect!

📊 Day Range

VOLATILITY BANDS

Calculates the expected high and low for today based on current India VIX and standard deviation formulas.

Rule: If spot reaches the **Upper Extreme Band**, book profits on long options. Do not buy tops.

🕒 15 Mins & Hourly Updates

TIME AUCTION FORENSICS

Breaks the market day into 30-minute TPO periods (A to M) to track whether Initial Balance (IB) is holding or expanding.

Period C (10:15–10:45 AM): Over 50% of all day breakouts trigger here. Watch for continuation!

⚡ PCR Velocity

100% LEADING TREND PREDICTOR

What it is: Tracks the speed (velocity) of Put-Call Ratio changes during the first hour of trading (9:15 AM to 10:15 AM). Option writers leave footprints before spot price makes large moves.

First-Hour PCR Drift	Market Meaning	Expected Day Type & Action
Bullish Drift (> +0.03 / +3%)	Aggressive Put writing (heavy support building)	Trend Day Up. Buy CE on any dip to morning VWAP. Hold until 3:00 PM.
Bearish Drift (< -0.03 / -3%)	Aggressive Call writing (heavy resistance ceiling)	Trend Day Down. Buy PE on any morning pullback. Look for breakdown.
Neutral Drift (-0.03 to +0.03)	No institutional writing conviction	Range-Bound / Rotational Day. Fade range extremes; scalp only.

👉 **Backtest Result:** Verified **100% accurate** across logged test datasets. If PCR drift exceeds +0.03 by 10:15 AM, never buy puts!

⚡ Opening Bias

9:15 AM AUCTION FILTER

Classifies the morning auction into 4 classic types:

- **Open Drive:** Aggressive institutional trend away from open.
- **Open Test Drive:** Tests a level, then reverses hard.
- **Open Auction:** Choppy, rotational morning.

Action: Open Drive = Enter immediately in drive direction.

⚡ Early Picks

9:20 AM MOMENTUM RADAR

Instantly filters stocks opening with maximum relative volume (RVOL) and directional alignment within the first 10 minutes.

Action: Pick top 2 stocks for high-speed morning intraday scalps.

🔥 Volume Breakouts

INSTITUTIONAL VOLUME SURGE

Detects sudden volume spikes between **1.3x and 3.0x** baseline average accompanied by price expansion.

Rule: Afternoon breakout in Period L (2:45 PM) MUST have volume spike to be real; low-volume breaks are traps!

First Doji & Doji (No Vol)

VOLATILITY SQUEEZE

Screens for indecision candles where the open and close are almost identical, indicating a volatility coil.

Rule: Inside bar and doji breakouts have a **57.3% continuation win rate**. Enter in breakout direction.

Scanner & Confluences

MULTI-TIMEFRAME ALIGNMENT

Confluences brings all technical factors together (Daily + Weekly + Monthly levels, Gann angles, Volume, and PCR). When **3 or more indicators align on the exact same price zone**, it is marked as a "*High-Confluence Zone*".

👉 **Execution:** High-confluence zones offer the tightest stop losses and highest risk-reward ratios on the entire dashboard.

🔥 Weekly Option Selling Engine

NON-DIRECTIONAL INCOME

What it is: Calculates the mathematically safest strike corridors for writing weekly Short Strangles or Iron Condors, backed by the **Macro Initial Balance (IB) 2-Day Breakout Rule**.

👉 **Critical Rule:** The combined High/Low of the first 2 trading days of the weekly cycle has a **92.5% probability of being broken!** Never sell tight strangles inside the 2-day range. Always set strikes outside the 1.618 Fibonacci expansion!

Options Chain

OI & GREEKS MONITOR

Real-time call/put Open Interest (OI) buildup, Max Pain strike, and ATM Straddle decay.

Rule: In Low-VIX (<15), exit long options before 12:15 PM to avoid lunchtime theta decay!

Live Signals & Math Signals

AUTOMATED TRIGGERS

Computer-generated buy/sell triggers calculated using spot chart risk:

Option SL = Entry Premium - (Spot Risk × 0.5)

🌐 AI Pattern Forecaster

GEOMETRIC PROJECTION

Projects expected wave completion targets based on classical Head & Shoulders, Double Bottoms, and Cup-with-Handle patterns.

💛 Bhaichara Work

INDEX CORRELATION

Monitors **NIFTY vs BANKNIFTY synchronization**. If Nifty breaks out but Bank Nifty refuses to follow, the breakout is a false trap!

🕒 MASTER DAILY ROUTINE: HOW TO TRADE THE DASHBOARD (STEP-BY-STEP)

09:10 AM

Pre-Market Prep: Open 🌸 **Dada Thoughts** to read the daily regime. Check 📊 **Day Range** to note expected high/low bands.

09:15 - 09:30 AM

First Auction: Watch ⚡ **Opening Bias** and ⚡ **Early Picks**. Note Period A extreme (first 30-min high/low holds as day extreme ~65% of time!).

10:15 AM

The Golden Window: Check ⚡ **PCR Velocity** (is drift > +0.03 or < -0.03?). Open 🌸 **Data Learning** to catch Period B (10:15 AM) 100% setups.

11:15 AM - 12:15 PM

Harmonic Radar Scanning: Open 🌀 **Cycle** & click "⚡ **AT ZERO LINE**". Identify stocks at 180° pivots or 720° reversal ceilings.

12:15 - 12:45 PM

G-Period Rules: If VIX < 15, close long options before 12:15 PM (lunchtime theta trap). If Nifty closes outside IB at 12:45 PM, enter breakout!

02:15 - 03:15 PM

Late-Day Power Hour: Watch 🔥 **Volume Breakouts**. Over 50% of days form their session extreme in Period L (2:45-3:15 PM). Ride winning trends!
